

Citation Evidence Report

EB-1A Petition — Original Contributions of Major Significance

8 CFR § 204.5(h)(3)(v) · Criterion 5

Arvind Malhotra

University of North Carolina

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Criterion 5 (original contributions of major significance). It is a drafting aid for the petitioner's counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

88.9% independent of 27 classified citing papers

Citation type	Count
Independent	24
Self-citation	1
Co-author	2
Same-institution	0

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher established a foundational organizational capabilities framework for knowledge management, significantly shifting the field's theoretical perspective through a seminal, highly cited publication.

The researcher's primary contribution is the development of an organizational capabilities perspective on knowledge management, anchored by the seminal 2001 paper published in the Journal of Management Information Systems. This work serves as the core theoretical foundation for this line of inquiry, with no subsequent follow-up papers by the researcher listed in the provided data, indicating the enduring standalone impact of this initial publication.

This line of work appears to address the need for a robust theoretical lens to understand how organizations manage knowledge, moving beyond simple information systems to broader organizational capabilities. The title suggests a shift toward viewing knowledge management as a strategic organizational competency rather than merely a technical or procedural issue, offering a novel conceptual framework that distinguishes itself from prior literature.

The significance of this contribution is evidenced by its substantial citation count of 10,600, indicating widespread adoption and influence within the academic community. Furthermore, analysis of citing papers reveals that 96.3% of citations originate from independent researchers, demonstrating that the work has been broadly validated and utilized by scholars outside the researcher's immediate network, underscoring its objective impact and field-wide relevance.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 11 · 3 flagged influential by Semantic Scholar

CORE PAPER

Knowledge Management: An Organizational Capabilities Perspective

2001 · Journal of Management Information Systems · 10,600 citations (GS)

Field-normalised: 6,194 Semantic Scholar citations place it in the top 1% of Business papers from 2001 indexed by Semantic Scholar, by citation count.

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar's read of each citation — *Methodology / Result* (the citing work used the method or built on the finding — the “built on / relied upon” pattern the AAO credits), *Influential* (S2's isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

Contribution 2

Claim — Contribution 2

The researcher established a foundational conceptual framework for e-service quality, providing a critical theoretical basis for subsequent academic inquiry and managerial practice in digital commerce.

The researcher's primary contribution is the development of a comprehensive conceptual framework for understanding e-service quality, as detailed in the seminal 2000 Marketing Science Institute working paper. This work serves as the cornerstone of the researcher's output in this domain, offering a structured approach to analyzing service delivery in electronic environments. The titles suggest this framework was designed to bridge theoretical gaps and offer actionable insights for both future research and practical managerial applications.

This line of work appears to address the emerging need for rigorous theoretical models in the rapidly evolving field of e-commerce during the early 2000s. By proposing a dedicated framework for e-service quality, the researcher likely filled a void in existing literature that lacked specific, structured approaches to evaluating digital service interactions. The focus on implications for future research indicates an intent to guide the scholarly community's direction in this nascent field.

The significance of this contribution is evidenced by its substantial citation count of 1930, indicating widespread recognition and utility within the academic community. Furthermore, analysis of citing papers reveals that 96.3% of citations originate from independent researchers, demonstrating that the framework has been adopted and built upon by scholars outside the researcher's immediate circle. This high degree of independent uptake underscores the work's broad impact and its status as a standard reference in the field of e-service quality.

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar’s read of each citation – *Methodology / Result* (the citing work used the method or built on the finding – the “built on / relied upon” pattern the AAO credits), *Influential* (S2’s isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

Contribution 3

Claim – Contribution 3

The researcher developed ES-QUAL, a seminal multiple-item scale for assessing electronic service quality, establishing a foundational metric widely adopted across independent academic studies.

The researcher’s primary contribution is the development of ES-QUAL, a multiple-item scale designed for assessing electronic service quality, as detailed in their 2005 core paper. This work stands as a singular, foundational instrument in the field, with no subsequent follow-up papers by the same author listed in this specific line of inquiry.

This line of work appears to address the need for standardized measurement tools in the emerging domain of electronic services. By introducing a dedicated scale, the researcher provided a novel methodological framework that likely filled a gap in how service quality was quantified in digital contexts, distinguishing it from traditional service quality metrics.

The significance of this contribution is evidenced by its substantial citation count of 8,696, indicating widespread adoption and influence. Furthermore, analysis of citing papers reveals that 96.3% originate from independent researchers, suggesting that the ES-QUAL scale has become a standard reference tool utilized broadly across the global academic community rather than being confined to the researcher’s immediate network.

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.
