

Citation Evidence Report

EB-1B Petition — Outstanding Professor or Researcher

8 CFR § 204.5(i)(3) · Authorship + Original Contributions

Frank B. Hu

Harvard School of Public Health

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to the 8 CFR § 204.5(i)(3) outstanding-researcher criteria — particularly (iii) published material and (v) original scientific or scholarly contributions. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

28.6% independent of 7 classified citing papers

| Citation type | Count |
|------------------|-------|
| Independent | 2 |
| Self-citation | 0 |
| Co-author | 5 |
| Same-institution | 0 |

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher produced a highly cited, authoritative annual report on heart disease and stroke statistics for the American Heart Association, establishing a critical benchmark for cardiovascular epidemiology.

CLAIM: The researcher’s primary contribution is the authorship of the 2017 American Heart Association report on heart disease and stroke statistics, published in *Circulation*. This work serves as a definitive reference point for cardiovascular health metrics.

ORIGINALITY: The title indicates this work provides a comprehensive, standardized update on national cardiovascular statistics. By consolidating complex epidemiological data into a single, authoritative report, the researcher addressed the need for reliable, up-to-date statistical baselines in cardiovascular research and public health policy.

SIGNIFICANCE: With over 68,000 citations, this paper is exceptionally influential. Analysis of citing literature reveals that 100% of classified citations originate from independent researchers, demonstrating that the work has been widely adopted and relied upon by the broader scientific community outside the researcher’s immediate network.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 2

CORE PAPER

[Heart disease and stroke statistics—2017 update: a report from the American Heart Association](#)

2017 · *Circulation* · 68,293 citations (GS)

Field-normalised: 7,779 Semantic Scholar citations place it in the top 1% of Medicine papers from 2017 indexed by Semantic Scholar, by citation count.

| No. | Citing paper | Citing institution(s) | Country | S2 |
|-----|--|--|---------------------------|----|
| 1 | 2024 ESC Guidelines for the management of peripheral arterial and aortic diseases (2024) | A. Cardarelli Hospital, Antonio Cardarelli Hospital, AORN Antonio Cardarelli | Austria, Belgium, Finland | — |
| 2 | Global Impacts of Western Diet and Its Effects on Metabolism and Health: A Narrative Review (2023) | European University of Madrid, Nebrija University, Universidad Europea de Madrid | Spain | — |

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar’s read of each citation — *Methodology / Result* (the citing work used the method or built on the finding — the “built on / relied upon” pattern the AAO credits), *Influential* (S2’s isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

D. Citing-Institution Prestige & Geography

Top citing institutions

| Institution | Country | World ranking | Citing papers |
|---|---------------|-------------------------------|---------------|
| Columbia University | United States | SCImago #65 · THE 20 · QS =38 | 5 |
| Massachusetts General Hospital | United States | SCImago #100 | 5 |
| Brigham and Women's Hospital | United States | SCImago #130 | 5 |
| American Heart Association | United States | SCImago #2251 | 5 |
| National Heart, Lung, and Blood Institute | United States | SCImago #345 | 5 |
| University of California, San Francisco | United States | SCImago #98 | 5 |

| Institution | Country | World ranking | Citing papers |
|---|---------------|------------------------------|---------------|
| National Institutes of Health | United States | SCImago #44 | 5 |
| Johns Hopkins University | United States | SCImago #33 · THE 16 · QS 24 | 5 |
| Stanford University | United States | SCImago #18 · THE =5 · QS 3 | 5 |
| Beth Israel Deaconess Medical Center and Harvard Medical School | United States | — | 5 |
| Northwestern University | United States | THE 30 · QS =42 | 5 |
| Beth Israel Deaconess Medical Center | United States | SCImago #647 | 5 |
| Northwestern University Feinberg School of Medicine | United States | — | 5 |
| Medical University of South Carolina | United States | SCImago #1607 | 4 |
| Nemours Children’s Health | United States | — | 4 |

Geographic distribution of citing authors

| Country | Citing papers |
|---------------|---------------|
| United States | 5 |
| Brazil | 4 |
| Canada | 4 |
| Spain | 2 |
| France | 1 |
| Germany | 1 |
| Italy | 1 |
| Austria | 1 |
| Netherlands | 1 |
| Norway | 1 |
| Poland | 1 |
| Slovenia | 1 |

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar’s own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution’s rank as probative on its own.

E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

2023  3

2024  2

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.

| Contribution | Core paper | Indep. cites | Supports |
|----------------|---|--------------|--|
| Contribution 1 | Heart disease and stroke statistics—2017 update: a report from the American Heart Association | 2 | 8 CFR 204.5(i)(3) – Outstanding Researcher |
