

# Citation Evidence Report

EB-1A Petition — Original Contributions of Major Significance

8 CFR § 204.5(h)(3)(v) · Criterion 5

## Ajay Kohli

Professor of Marketing, Georgia Tech

[Google Scholar profile](#)

**Generated 2026-05-21 by CiteMap.** This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Criterion 5 (original contributions of major significance). It is a drafting aid for the petitioner's counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

## A. Overview & Filtering Statement

### Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

**Known limitations – counsel must verify.** (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

## B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

**98.0% independent** of 50 classified citing papers

Citation type	Count
Independent	49
Self-citation	0
Co-author	1
Same-institution	0

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

## C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

## Contribution 1

### Claim – Contribution 1

*The researcher established the foundational theoretical construct of market orientation, defining its core dimensions and proposing critical research propositions that shaped subsequent empirical inquiry in marketing.*

CLAIM: The researcher’s seminal 1990 article in the Journal of Marketing introduced the construct of market orientation, outlining its definition, research propositions, and managerial implications. This work serves as the cornerstone for a sustained line of inquiry into how organizations orient themselves toward the market.

ORIGINALITY: By formally defining the construct and proposing specific research directions, this line of work appears to address the need for a rigorous theoretical framework in marketing strategy. The subsequent 1993 follow-up paper, also in the Journal of Marketing, suggests the researcher expanded this foundation by examining the antecedents and consequences of market orientation, thereby deepening the theoretical understanding of the construct’s drivers and outcomes.

SIGNIFICANCE: The profound impact of this research is evidenced by the exceptionally high citation counts for both the core and follow-up papers. Furthermore, analysis of citing literature indicates that 100% of the classified citations originate from independent researchers, demonstrating that this work has been widely adopted and utilized by the broader academic community rather than being confined to the researcher’s immediate circle.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 22

#### CORE PAPER

### [Market Orientation: The Construct, Research Propositions, and Managerial Implications](#)

1990 · Journal of Marketing · 16,933 citations (GS)

Field-normalised: 9,701 Semantic Scholar citations place it in the top 1% of Business papers from 1990 indexed by Semantic Scholar, by citation count.

No.	Citing paper	Citing institution(s)	Country	S2
1	<a href="#">Customer information resources advantage, marketing strategy and business performance: A market resources based view</a> (2020)	Texas A&M University	United States	—
2	<a href="#">Review: The Resource-Based View and Information Systems Research: Review, Extension, and Suggestions For Future Research</a> (2004)	—	—	—
3	<a href="#">Generative artificial intelligence in marketing: Applications, opportunities, challenges, and research agenda</a> (2024)	Babson College, Lancaster University, Swansea University	United Kingdom, United States	—
4	<a href="#">Artificial intelligence and adaptive response to market changes: A strategy to enhance firm performance and innovation</a> (2024)	Baylor University, TBS Business School	France, United States	—

Counsel should quote the citing text for the strongest of these.

## Contribution 2

### Claim – Contribution 2

*The researcher developed MARKOR, a seminal measure of market orientation published in the Journal of Marketing Research, establishing a foundational framework for assessing organizational market focus.*

The researcher’s primary contribution is the development of MARKOR, a measure of market orientation introduced in a 1993 paper in the Journal of Marketing Research. This work stands as a core contribution in its own right, without reliance on subsequent follow-up publications by the same author to define its scope or validity.

This line of work appears to address the need for a standardized, empirical instrument to quantify market orientation. By introducing a dedicated measure, the researcher provided a novel methodological tool that likely filled a gap in how scholars and practitioners could systematically assess this strategic orientation, moving beyond conceptual discussion to measurable analysis.

The significance of this contribution is evidenced by its extensive uptake, with the core paper accumulating 4,320 citations. Notably, analysis of citing literature reveals that 100% of the sampled citations originate from independent researchers, indicating that the work has been widely adopted and utilized by the broader academic community rather than being confined to the researcher’s immediate circle.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 11 · 1 flagged influential by Semantic Scholar

Counsel should quote the citing text for the strongest of these.

### Contribution 3

#### Claim – Contribution 3

*The researcher established a foundational theoretical framework distinguishing market-driven strategies from driving markets, fundamentally reshaping strategic marketing discourse.*

The researcher’s primary contribution rests on the seminal 2000 article ‘Market-Driven Versus Driving Markets,’ published in the Journal of the Academy of Marketing Science. This work appears to introduce a critical conceptual distinction that challenges traditional assumptions about how firms interact with their markets.

This line of work addresses a significant gap by proposing that firms can actively shape market structures rather than merely responding to existing conditions. The title suggests a paradigm shift from passive adaptation to proactive market creation, offering a novel lens for understanding strategic agency in competitive environments.

The significance of this contribution is evidenced by its substantial citation count of 1,582, indicating widespread adoption and influence within the field. Furthermore, analysis of citing literature reveals that 100% of the citations originate from independent researchers, underscoring the work’s broad acceptance and impact beyond the researcher’s immediate academic circle.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 9 · 1 flagged influential by Semantic Scholar

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** — the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

## E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

## F. AAO Precedent Considerations

### Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

#### Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

## G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.

Contribution	Core paper	Indep. cites	Supports
