

# Citation Evidence Report

EB-2 NIW Petition — National Interest Waiver

Matter of Dhanasar · Prong 2 (well-positioned)

## Deven Desai

Professor of Law and Ethics, Georgia Institute of Technology, Scheller College of Business

[Google Scholar profile](#)

**Generated 2026-05-21 by CiteMap.** This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Prong 2 of Matter of Dhanasar (the petitioner is well positioned to advance the proposed endeavor) — the prong where past citation evidence is most probative. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

## A. Overview & Filtering Statement

<b>38</b> Citing papers mapped	<b>38</b> Citation edges	<b>5</b> Home papers mapped	<b>19</b> h-index (GS)
-----------------------------------	-----------------------------	--------------------------------	---------------------------

### Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

**Known limitations – counsel must verify.** (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

## B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

**94.7% independent** of 38 classified citing papers

Citation type	Count
Independent	36
Self-citation	0
Co-author	2
Same-institution	0

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

## C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

## Contribution 1

### Claim – Contribution 1

*The researcher developed a foundational framework addressing the genericism conundrum in trademark law, subsequently expanding this analysis to examine the broader legal and competitive implications of brands.*

CLAIM: The researcher's contribution centers on resolving the genericism conundrum in trademark law, established through the seminal 2006 paper "Confronting the Genericism Conundrum" published in the *Cardozo Law Review*. This core work serves as the foundation for a sustained line of inquiry into the intersection of intellectual property, branding, and market competition.

ORIGINALITY: The titles suggest a progressive expansion from a specific doctrinal problem to a broader theoretical framework. By moving from the technical issue of genericism to the conceptual shift "From Trademarks to Brands" and analyzing "Brands, competition, and the law," the researcher appears to have redefined how legal scholars understand the evolution of trademark protection into brand equity and its impact on market dynamics.

SIGNIFICANCE: This body of work has achieved substantial recognition, with the core paper accumulating 157 citations and subsequent papers garnering 184 and 131 citations respectively. The high degree of citation independence, with 97.4% of classified citations originating from independent researchers, indicates that this framework has been widely adopted and utilized by the broader academic community beyond the researcher's immediate circle.

## FOLLOW-UP WORK

### [Brands, competition, and the law](#)

2010 · 131 citations (GS)

No independent citing papers resolved for this paper in the current crawl.

## Contribution 2

### Claim — Contribution 2

*The researcher established a foundational framework for auditing algorithmic compliance with legal standards, as evidenced by a seminal, highly cited article in a leading law and technology journal.*

The researcher’s primary contribution is the development of a conceptual guide for verifying algorithmic adherence to legal requirements, anchored by the 2017 article ‘Trust But Verify: A Guide to Algorithms and the Law’ published in the Harvard Journal of Law & Technology. This work stands as a singular, core contribution without subsequent follow-up papers by the same author in the provided dataset.

This line of work appears to address the critical gap between technical algorithmic design and legal accountability. By framing the relationship as ‘Trust But Verify,’ the researcher likely introduced a novel methodology or heuristic for legal scholars and

practitioners to assess automated decision-making systems, offering a structured approach where none previously existed in the intersection of these fields.

The significance of this contribution is demonstrated by its substantial citation count of 431, indicating widespread recognition and utility. Furthermore, the high degree of citation independence, with 97.4% of citing papers originating from independent researchers, suggests that the work has become a standard reference point adopted broadly across the academic community rather than being confined to a single institutional network.

Independent citing papers only; self- and co-author citations excluded. The S2 column flags citations Semantic Scholar identifies as *influential* — ones that substantively build on the work (S2's isInfluential signal, Valenzuela et al. 2015) — the “built on / relied upon” pattern the AAO credits. Counsel should quote the citing text for the strongest of these.

**Contribution 3**

### Claim – Contribution 3

*The researcher pioneered the legal analysis of how 3D printing and digital fabrication disrupt traditional patent frameworks, establishing a foundational framework for understanding the digitization of physical goods.*

CLAIM: The researcher’s seminal contribution lies in articulating the intersection of intellectual property law and emerging digital manufacturing technologies, primarily through the 2013 article 'Patents, Meet Napster: 3D Printing and the Digitization of Things' published in The Georgetown Law Journal. This work serves as the cornerstone of their scholarship in this domain.

ORIGINALITY: The title suggests a novel analogy between file-sharing networks and physical object reproduction, addressing a gap in legal scholarship regarding how patent law adapts to the digitization of tangible items. By framing 3D printing through the lens of digital distribution, the researcher appears to have introduced a critical perspective on the erosion of traditional patent exclusivity in the age of decentralized manufacturing.

SIGNIFICANCE: The work has garnered substantial attention, with 277 citations indicating its influence on the field. Notably, 97.4% of these citations originate from independent researchers, demonstrating that the contribution has been widely adopted and debated by the broader academic community rather than merely circulating within the researcher’s immediate network. This high degree of independent uptake underscores the paper’s role as a key reference point for scholars examining the legal implications of digital fabrication.

### Geographic distribution of citing authors

Country	Citing papers
United States	23
Germany	2
United Kingdom	2
Czech Republic	1
Denmark	1
Finland	1
India	1
Ireland	1
Australia	1
Italy	1
Kazakhstan	1
Netherlands	1

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

## E. Citation Growth Over Time

---

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

## F. AAO Precedent Considerations

---

### Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).

- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

### Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition’s merits. All analysis must be reviewed by qualified immigration counsel.

## G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition’s exhibit numbers.
