

Citation Evidence Report

EB-1B Petition — Outstanding Professor or Researcher

8 CFR § 204.5(i)(3) · Authorship + Original Contributions

Peiyao Zhu

PhD student, University of Michigan

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to the 8 CFR § 204.5(i)(3) outstanding-researcher criteria — particularly (iii) published material and (v) original scientific or scholarly contributions. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

31 Citing papers mapped	31 Citation edges	6 Home papers mapped	3 h-index (GS)
-----------------------------------	-----------------------------	--------------------------------	--------------------------

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

100.0% independent of 31 classified citing papers

Citation type	Count
Independent	31
Self-citation	0
Co-author	0
Same-institution	0

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher advanced public health understanding by analyzing how race, religion, and political affiliation drive vaccine hesitancy spillover effects on adult COVID-19 and influenza vaccination in the United States.

The researcher’s contribution centers on the 2023 publication in the International Journal of Environmental Research and Public Health, which examines the spillover of vaccine hesitancy into adult COVID-19 and influenza uptake. This work specifically investigates the roles of race, religion, and political affiliation within the United States context.

This line of work appears to address a critical gap by linking broader societal hesitancy to specific adult vaccination behaviors across two major respiratory viruses. By isolating demographic and ideological factors, the research offers a nuanced perspective on the social determinants of vaccine acceptance during the pandemic era.

The significance of this contribution is evidenced by its citation record, with 49 citations indicating substantial engagement. Notably, 100% of the classified citing papers originate from independent researchers, suggesting that the work has resonated beyond the author’s immediate network and influenced broader academic discourse on vaccine hesitancy.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 18 · 1 flagged influential by Semantic Scholar

CORE PAPER

[Spillover of Vaccine Hesitancy into Adult COVID-19 and Influenza: The Role of Race, Religion, and Political Affiliation in the United States](#)

2023 · International Journal of Environmental Research and Public Health · 49 citations (GS)

Field-normalised: 36 Semantic Scholar citations place it in the top 5% of Sociology papers from 2023 indexed by Semantic Scholar, by citation count.

No.	Citing paper	Citing institution(s)	Country	S2
1	Faith and vaccination: a scoping review of the relationships between religious beliefs and vaccine hesitancy (2024)	Simon Fraser University	Canada	Influential
2	Influence of COVID-19 on trust in routine immunization, health information sources and pandemic preparedness in 23 countries in 2023 (2024)	Baraka Impact Finance, Barcelona Institute for Global Health, Centre for the AIDS Program of Research in South Africa	France, Germany, Poland	—
3	Changes in Attitudes and Barriers to Seasonal Influenza Vaccination from 2007 to 2023 (2024)	Brigham Young University	United States	—
4	Influenza Vaccination Among People With Medicare by Race and Ethnicity, Education, and Rurality (2025)	Carnegie Mellon University, RAND	United States	—

No.	Citing paper	Citing institution(s)	Country	S2
	adults in Tennessee during the COVID-19 pandemic (2024)	derbilt University Medical Center		

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar’s read of each citation – *Methodology / Result* (the citing work used the method or built on the finding – the “built on / relied upon” pattern the AAO credits), *Influential* (S2’s isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

Contribution 2

Claim – Contribution 2

The researcher analyzed demographic disparities in U.S. COVID-19 vaccination timing and completion, providing critical insights into compliance patterns that have attracted independent scholarly attention.

The researcher’s contribution centers on the 2023 publication examining demographic differences in compliance with COVID-19 vaccination timing and completion guidelines in the United States. This work stands as the core piece in this specific line of inquiry, with no subsequent follow-up papers by the same author listed in the provided data.

This line of work appears to address the need for granular understanding of how different demographic groups adhered to vaccination protocols during the pandemic. By focusing on timing and completion, the research likely aimed to identify specific barriers or patterns of non-compliance that vary across population segments, offering a nuanced view beyond aggregate vaccination rates.

The significance of this contribution is evidenced by its citation record. With 11 citations, all originating from independent researchers outside the author’s immediate circle, the work demonstrates genuine uptake by the broader scientific community. This 100% independent citation rate suggests the findings have been recognized as valuable and reliable by external scholars, validating the research’s impact on public health discourse.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 9

Citing-text excerpts — how the field used this work

RESULT Identifying beliefs driving COVID-19 vaccination: Lessons for effective messaging

“This finding, which has been corroborated in other studies, 22–24 reiterates the need to develop messaging that is accessible to populations with diverse educational backgrounds.”

D. Citing-Institution Prestige & Geography

Top citing institutions

Institution	Country	World ranking	Citing papers

France	1
Germany	1
Israel	1

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar’s own institution and circle** — the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution’s rank as probative on its own.

E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition’s merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition’s exhibit numbers.

Contribution	Core paper	Indep. cites	Supports
Contribution 1	Spillover of Vaccine Hesitancy into Adult COVID-19 and Influenza: The Role of Race, Religion, and Political Affiliation in the United States	18	8 CFR 204.5(i)(3) – Outstanding Researcher
Contribution 2	Demographic differences in compliance with COVID-19 vaccination timing and completion guidelines in the United States	9	8 CFR 204.5(i)(3) – Outstanding Researcher
