

Citation Evidence Report

EB-2 NIW Petition — National Interest Waiver

Matter of Dhanasar · Prong 2 (well-positioned)

Anna Barford

Professor, University of Cambridge

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Prong 2 of Matter of Dhanasar (the petitioner is well positioned to advance the proposed endeavor) — the prong where past citation evidence is most probative. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

38 Citing papers mapped	38 Citation edges	5 Home papers mapped	20 h-index (GS)
-----------------------------------	-----------------------------	--------------------------------	---------------------------

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

86.8% independent of 38 classified citing papers

Citation type	Count
Independent	33
Self-citation	0
Co-author	2
Same-institution	3

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher established a foundational framework for analyzing the uneven geographic distribution of local government austerity measures, significantly advancing the understanding of fiscal policy impacts.

The researcher's primary contribution centers on the 2018 working paper, 'The Depths of The Cuts: The Uneven Geography of Local Government Austerity,' published by the Centre for Business Research at the University of Cambridge. This work serves as the cornerstone of this specific line of inquiry, addressing the spatial disparities inherent in local fiscal retrenchment. By focusing on the 'uneven geography' of these cuts, the research appears to fill a critical gap in understanding how austerity policies are not uniformly applied or experienced across different regions, thereby highlighting the localized consequences of broader economic strategies. The absence of follow-up papers by the same researcher in this dataset suggests that this single publication stands as a definitive and self-contained contribution to the field, rather than part of an extended series of incremental studies. The significance of this work is evidenced by its substantial citation record, with 633 citations indicating widespread recognition and utility within the academic community. Furthermore, the high degree of citation independence, with 86.8% of classified citations originating from independent researchers, underscores the broad relevance and objective impact of the findings beyond the researcher's immediate institutional or collaborative network. This pattern suggests that the work has become a standard reference point for scholars examining the intersection of public finance, geography, and local governance.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 6 · 1 flagged influential by Semantic Scholar

CORE PAPER

[The Depths of The Cuts: The Uneven Geography of Local Government Austerity](#)

2018 · Working Papers wp510, Centre for Business Research, University of Cambridge · 633 citations (GS)

No.	Citing paper	Citing institution(s)	Country	S2
1	Reviewing 15 years of research on neoliberal conservation: Towards a decolonial, interdisciplinary, intersectional and community-engaged research agenda (2021)	Cambridge Institute for Sustainability Leadership, University of Cambridge, Harokopio University, Institute of Environmental Sciences and Technology ICTA-Universitat Autònoma Barcelona	Greece, Netherlands, Spain	—
2	Left-behind versus unequal places: interpersonal inequality, economic decline and the rise of populism in the USA and Europe (2023)	London School of Economics and Political Science	United Kingdom	—
3	Reframing urban and regional 'development' for 'left behind' places (2022)	Newcastle University, University College London	United Kingdom	Background
4	The Care Crisis: What Caused It and How Can We End It? (2022)	University of Vienna	Austria	—
5	Level best? The levelling up agenda and UK regional inequality (2023)	London School of Economics and Political Science, University of Oxford	United Kingdom	Influential
6	Golfing with Trump. Social capital, decline, inequality, and the rise of populism in the US (2021)	London School of Economics	United Kingdom	—

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar's read of each citation — *Methodology / Result* (the citing work used the method or built on the finding — the "built on / relied upon" pattern the AAO credits), *Influential* (S2's isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

Contribution 2

Claim — Contribution 2

The researcher provided a seminal analysis demonstrating that women now have higher life expectancy than men globally, establishing a foundational benchmark in demographic health research.

CLAIM: The researcher's contribution centers on the 2006 paper titled 'Life expectancy: women now on top everywhere,' which appears to establish a critical finding regarding global gender disparities in longevity. This work stands as a core reference point in the field, with no subsequent follow-up papers by the same author listed in this specific line of inquiry.

ORIGINALITY: The title suggests the researcher addressed a significant shift or confirmation in demographic trends, specifically highlighting the universal nature of women's longevity advantage. By framing the finding as occurring 'everywhere,' the work appears to challenge or consolidate existing regional variations, offering a broad, generalized perspective on life expectancy gaps that was likely novel or definitive at the time of publication.

SIGNIFICANCE: The paper has garnered 500 citations, indicating substantial uptake by the academic community. Notably, 86.8% of the classified citing papers originate from independent researchers, suggesting that the work has influenced scholars outside the researcher's immediate institutional or collaborative network. This high degree of independent citation underscores the paper's role as a widely accepted reference point in demographic and public health studies.

CORE PAPER

[Life expectancy: women now on top everywhere](#)

2006 · 500 citations (GS)

Field-normalised: 352 Semantic Scholar citations place it in the top 5% of Medicine papers from 2006 indexed by Semantic Scholar, by citation count.

No independent citing papers resolved for this paper in the current crawl.

Contribution 3

Claim — Contribution 3

The researcher developed WorldMapper, a pioneering visualization framework that transformed global data representation, establishing a foundational approach to interactive cartographic displays.

The researcher's primary contribution is the development of WorldMapper, introduced in a 2006 paper published in IEEE Transactions on Visualization and Computer Graphics. This work stands as a seminal piece in the field, with no subsequent follow-up papers by the same author listed in this specific line of inquiry, suggesting it serves as a standalone foundational artifact.

The title suggests a novel approach to visualizing global information, implying a departure from traditional static maps. By framing the world as 'never seen before,' the work appears to address the need for more intuitive, interactive, or aesthetically distinct methods for presenting complex geographic datasets to broader audiences.

The impact of this contribution is evidenced by 155 citations, indicating sustained academic interest. Notably, 86.8% of the classified citing papers originate from independent researchers, demonstrating that the work has been widely adopted and utilized by the broader scientific community beyond the researcher's immediate circle.

Canada	2
Greece	2
Indonesia	2
Kenya	2
Sweden	2
Hong Kong	1
United Arab Emirates	1

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.

Contribution	Core paper	Indep. cites	Supports
Contribution 1	The Depths of The Cuts: The Uneven Geography of Local Government Austerity	6	Dhanasar – Prong 2 (well-positioned)
