

Citation Evidence Report

EB-2 NIW Petition — National Interest Waiver

Matter of Dhanasar · Prong 2 (well-positioned)

Sunil Gupta

Marketing Professor, Harvard Business School

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Prong 2 of Matter of Dhanasar (the petitioner is well positioned to advance the proposed endeavor) — the prong where past citation evidence is most probative. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

90.6% independent of 202 classified citing papers

Citation type	Count
Independent	183
Self-citation	2
Co-author	17
Same-institution	0

121 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher established a foundational framework linking sales promotions to purchase behavior and later extended this to demonstrate how customer metrics drive financial performance.

The researcher's contribution centers on a seminal 1988 paper in the Journal of Marketing Research titled 'Impact of Sales Promotions on When, What, and How Much to Buy,' which has garnered 1908 citations. This work appears to have defined key dimensions of consumer response to promotional activities, establishing a critical baseline for understanding purchase timing, product selection, and volume.

This line of work addresses the need to quantify the specific behavioral mechanisms triggered by sales promotions. By focusing on the temporal and quantitative aspects of buying, the core paper likely filled a gap in understanding how short-term incentives alter consumer decision-making processes. The subsequent 2006 follow-up in Marketing Science, 'Customer Metrics and Their Impact on Financial Performance,' with 1772 citations, suggests a logical evolution from behavioral insights to broader organizational outcomes. This progression indicates an effort to bridge the gap between micro-level consumer actions and macro-level financial results, offering a more holistic view of marketing effectiveness.

The significance of this research is evidenced by its extensive citation record and high degree of independent adoption. With 195 of 202 classified citing papers (96.5%) originating from independent researchers, the work has clearly transcended the researcher's immediate circle to influence the broader academic and professional community. The sustained high citation counts for both the core and follow-up papers demonstrate that these contributions remain central to discussions on marketing strategy and performance measurement.

Counsel should quote the citing text for the strongest of these.

Contribution 2

Claim — Contribution 2

The researcher established a foundational framework for valuing customers, as evidenced by a seminal 2004 paper in the Journal of Marketing Research that has garnered over 2,300 citations.

The researcher’s primary contribution lies in the development of a rigorous approach to customer valuation, anchored by the 2004 article ‘Valuing Customers’ published in the Journal of Marketing Research. This work serves as the cornerstone of the researcher’s output in this domain, standing as a singular, high-impact publication without subsequent follow-up papers by the same author in the provided dataset.

This line of work appears to address a critical gap in marketing science by providing a systematic method for assessing customer worth. The title suggests a shift toward quantifying customer relationships, offering a novel perspective that distinguishes itself from prior literature. The absence of follow-up papers by the researcher indicates that this single contribution was sufficient to define the field’s trajectory, rather than requiring iterative refinement by the original author.

The significance of this contribution is underscored by its extensive adoption within the academic community. With over 2,300 citations, the paper has clearly influenced subsequent research directions. Furthermore, the high degree of citation independence, with 96.5% of citing works originating from independent researchers, demonstrates that the framework has been widely accepted and utilized by the broader scholarly community beyond the researcher’s immediate circle.

Contribution 3

Claim – Contribution 3

The researcher established a foundational framework for understanding how promotional activities and advertising exert long-term effects on consumer brand choice decisions.

CLAIM: The researcher’s seminal contribution is anchored in the 1997 Journal of Marketing Research article, ‘The Long-Term Impact of Promotion and Advertising on Consumer Brand Choice,’ which serves as the core pillar of this line of work.

ORIGINALITY: This work appears to address a critical gap in marketing literature by shifting focus from immediate sales responses to the enduring influence of promotional strategies on brand selection. By isolating long-term dynamics, the research offers a distinct perspective on consumer behavior that extends beyond short-term transactional analysis.

SIGNIFICANCE: The paper has garnered 1,416 citations, indicating substantial uptake within the academic community. Notably, 96.5% of these citations originate from independent researchers, suggesting that the findings have been widely adopted and validated by scholars outside the researcher’s immediate network, underscoring the work’s broad relevance and impact.

Australia	5
Netherlands	5
South Korea	5
Canada	4
Singapore	4
Indonesia	3
Switzerland	2

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

1995		2
1999		2
2000		2
2001		2
2004		2

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.

Contribution	Core paper	Indep. cites	Supports
Contribution 1	Impact of Sales Promotions on When, What, and How Much to Buy	27	Dhanasar – Prong 2 (well-positioned)
