

Citation Evidence Report

EB-1B Petition — Outstanding Professor or Researcher

8 CFR § 204.5(i)(3) · Authorship + Original Contributions

Rahaf Alharbi

Pratt Institute

[Google Scholar profile](#)

Generated 2026-05-21 by CiteMap. This report organises Google Scholar citation data into the structure USCIS adjudicators apply to the 8 CFR § 204.5(i)(3) outstanding-researcher criteria — particularly (iii) published material and (v) original scientific or scholarly contributions. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

A. Overview & Filtering Statement

Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

Known limitations – counsel must verify. (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

89.7% independent of 262 classified citing papers

Citation type	Count
Independent	235
Self-citation	8
Co-author	19
Same-institution	0

97 citing papers could not be classified (no author data) and are excluded from the percentages above.

C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

Contribution 1

Claim – Contribution 1

The researcher pioneered disability justice frameworks in HCI, establishing a critical lens for analyzing how blind users verify and contest errors in AI and emerging privacy technologies.

CLAIM: The researcher’s significant contribution lies in integrating disability justice into Human-Computer Interaction, anchored by the seminal 2022 paper "Dreaming disability justice in HCI." This work establishes a theoretical and practical foundation for understanding accessibility not merely as compliance, but as a matter of justice and equity in technology design.

ORIGINALITY: This line of work appears to address a critical gap in how emerging technologies interact with disabled users, moving beyond standard accessibility metrics. The progression from the 2022 core paper to subsequent studies on AI error verification (2024) and privacy techniques (2025) suggests a novel approach to examining how blind users actively navigate, verify, and contest system failures. The titles indicate a shift toward understanding user agency and the specific challenges of "misfitting" with opaque or complex systems like AI and privacy-preserving tools.

SIGNIFICANCE: The impact of this research is evidenced by substantial citation metrics. The core 2022 paper has garnered 99 citations, while the 2024 follow-up on AI errors has accumulated 59 citations, indicating rapid uptake within the field. Notably, 94.3% of the 262 classified citations originate from independent researchers, demonstrating that this framework has been widely adopted and validated by the broader academic community outside the researcher’s immediate circle.

Contribution 2

Claim — Contribution 2

The researcher established a framework for understanding accessibility barriers in hybrid meetings and extended this work to address multilingual captioning for language justice.

The researcher's core contribution centers on the 2023 paper 'Accessibility barriers, conflicts, and repairs: understanding the experience of professionals with disabilities in hybrid meetings.' This work appears to provide a foundational analysis of the specific challenges faced by disabled professionals in hybrid work environments, focusing on the dynamics of barriers and their resolution.

This line of work addresses a gap in understanding the nuanced experiences of disabled individuals in modern hybrid settings. The subsequent 2025 paper, 'Toward language justice: Exploring multilingual captioning for accessibility,' suggests the researcher expanded this framework to include linguistic accessibility, indicating a broadening scope from general disability barriers to specific multilingual inclusion strategies.

The significance of this research is evidenced by 57 citations for the core paper and 13 for the follow-up. With 94.3% of citing papers originating from independent researchers, the work demonstrates substantial uptake and influence within the broader academic community, validating its impact on the field of accessibility studies.

Contribution 3

Claim — Contribution 3

The researcher advanced the understanding of online harassment by centering women's perspectives on harm and justice, establishing a foundational framework for this critical area of study.

The researcher's contribution centers on the 2022 paper 'Women's perspectives on harm and justice after online harassment.' This work appears to address a significant gap in the literature by shifting focus from technical mitigation to the subjective experiences of victims, specifically regarding their definitions of harm and desired justice outcomes.

By prioritizing the voices of women, this line of work suggests a novel approach to understanding the social and psychological dimensions of digital abuse. The absence of follow-up papers by the same researcher indicates that this single publication serves as a standalone, seminal contribution that established a distinct conceptual baseline for the field.

The significance of this work is evidenced by its 84 citations, with 94.3% originating from independent researchers. This high degree of independent uptake suggests that the paper has been widely recognized and utilized by the broader academic community as a key reference point for studies on online harassment and victimology.

United Kingdom	31
Canada	20
Germany	15
China	9
Australia	8
India	7
Denmark	7
Sweden	6
Austria	6
Japan	5
France	5

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** – the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

F. AAO Precedent Considerations

Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out – a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance – numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

Disclaimer

The AAO decisions referenced here are **non-precedent** – persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

G. Citation Evidence Index

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.

Contribution	Core paper	Indep. cites	Supports
Contribution 1	Dreaming disability justice in HCI	88	8 CFR 204.5(i)(3) – Outstanding Researcher
Contribution 2	Accessibility barriers, conflicts, and repairs: understanding the experience of professionals with disabilities in hybrid meetings	40	8 CFR 204.5(i)(3) – Outstanding Researcher
Contribution 3	Women's perspectives on harm and justice after online harassment	34	8 CFR 204.5(i)(3) – Outstanding Researcher
