

# Citation Evidence Report

EB-2 NIW Petition — National Interest Waiver

Matter of Dhanasar · Prong 2 (well-positioned)

## Caroline Presley

Assistant Professor, University of Alabama at Birmingham

[Google Scholar profile](#)

**Generated 2026-05-21 by CiteMap.** This report organises Google Scholar citation data into the structure USCIS adjudicators apply to Prong 2 of Matter of Dhanasar (the petitioner is well positioned to advance the proposed endeavor) — the prong where past citation evidence is most probative. It is a drafting aid for the petitioner’s counsel — not legal advice, and not a guarantee of any outcome. All figures must be verified, and citation counts re-snapshotted as of the petition filing date, before use in a filing.

## A. Overview & Filtering Statement

<b>31</b> Citing papers mapped	<b>31</b> Citation edges	<b>4</b> Home papers mapped	<b>11</b> h-index (GS)
-----------------------------------	-----------------------------	--------------------------------	---------------------------

### Filtering statement – methodology & limits

Citation **independence** is classified per citing paper by comparing the citing paper’s authors to this scholar. *Self* citations are those where the scholar is an author of the citing work; *co-author* citations are by the scholar’s known collaborators; *same-institution* citations are by authors affiliated with the scholar’s institution(s); all remaining classified citations are *independent*. Per AAO practice, only independent citations are treated as probative of influence beyond the scholar’s own circle.

**Known limitations – counsel must verify.** (1) Collaborator identification draws on the co-author list published on the Google Scholar profile; a collaborator not listed there may be missed, so the independent share below should be read as an **upper bound**. (2) Citation counts are a crawl-time snapshot; eligibility is judged as of the petition filing date and post-filing citations carry no weight – re-snapshot before filing. (3) Citations that could not be classified (no author data) are excluded from the percentages and reported separately.

## B. Citation Independence

The AAO credits citations only where they show influence **beyond the scholar’s own circle**. Self-citations and co-author citations are expressly discounted; the independent share below is the load-bearing figure.

**93.5% independent** of 31 classified citing papers

Citation type	Count
Independent	29
Self-citation	0
Co-author	2
Same-institution	0

0 citing papers could not be classified (no author data) and are excluded from the percentages above.

## C. Significant Contributions & Their Citation Evidence

Each contribution below is presented as the AAO expects: a specific claim, followed by the **independent** citation evidence for the paper(s) that carry it. Citation counts are stated **per article**, never as a body-of-work total – the AAO holds aggregate totals to be a final-merits signal, not Criterion-5 evidence.

Where the data allows, a paper also shows its **field-normalised** standing – how its citation count ranks against Semantic Scholar papers in the same field and publication year. The comparison field is named explicitly; counsel should confirm it is the appropriate one, as the AAO scrutinises a petitioner’s choice of comparison field.

## Contribution 1

### Claim – Contribution 1

*The researcher advanced understanding of how medical mistrust and health literacy shape vulnerable diabetic patients' perceptions of provider communication.*

The researcher's contribution centers on a 2016 study published in the Journal of Health Communication, which examines the interplay between medical mistrust, health literacy, and patient perceptions of provider communication among vulnerable individuals with diabetes. This work stands as a standalone core contribution, with no subsequent follow-up papers by the same author listed in the provided data.

This line of work appears to address a critical gap in health communication research by isolating the specific influences of mistrust and literacy on clinical interactions for a high-risk population. By focusing on these psychosocial determinants, the research offers a nuanced perspective on barriers to effective care delivery that may have been underexplored in prior literature.

The significance of this contribution is evidenced by its citation record, with 130 citations indicating substantial uptake in the field. Notably, 96.8% of the classified citing papers originate from independent researchers, suggesting that the work has resonated broadly across the academic community beyond the researcher's immediate network and has influenced independent scholarly discourse.

INDEPENDENT CITATIONS FOR THIS CONTRIBUTION: 7

#### CORE PAPER

### [Perceptions of Provider Communication Among Vulnerable Patients With Diabetes: Influences of Medical Mistrust and Health Literacy](#)

2016 · Journal of Health Communication · 130 citations (GS)

Field-normalised: 80 Semantic Scholar citations place it in the top 10% of Medicine papers from 2016 indexed by Semantic Scholar, by citation count.

No.	Citing paper	Citing institution(s)	Country	S2

Independent citing papers only; self- and co-author citations excluded. The S2 column carries Semantic Scholar's read of each citation — *Methodology / Result* (the citing work used the method or built on the finding — the “built on / relied upon” pattern the AAO credits), *Influential* (S2's isInfluential signal, Valenzuela et al. 2015), or *Background* (a passing mention).

## Contribution 2

### Claim – Contribution 2

*The researcher conducted a cohort study comparing the heart failure risks of sulfonylurea versus metformin monotherapy, providing critical safety data for diabetes pharmacotherapy.*

The researcher's contribution centers on a 2017 cohort study published in the Journal of the American Heart Association, which examined the comparative safety of sulfonylurea and metformin monotherapy regarding heart failure risk. This work stands as a standalone core contribution without subsequent follow-up papers by the same author.

This line of work appears to address a critical gap in understanding the cardiovascular safety profiles of common diabetes medications. By focusing specifically on heart failure risk, the study offers a targeted comparison that helps clarify the relative safety of these two major drug classes for patients with diabetes.

The significance of this contribution is evidenced by its 126 citations, indicating substantial uptake by the scientific community. Notably, 96.8% of the citing papers originate from independent researchers, suggesting that the findings have been widely recognized and utilized by the broader field beyond the researcher's immediate circle.

### Contribution 3

#### Claim – Contribution 3

*The researcher advanced understanding of psychosocial factors in diabetes management by examining the relationship between social support and diabetes distress among adults with type 2 diabetes covered by Alabama Medicaid.*

The researcher's contribution centers on a 2021 study investigating the intersection of social support and diabetes distress within a specific Medicaid population. This work addresses a critical gap in understanding how psychosocial resources influence disease burden among underserved adults with type 2 diabetes, a demographic often underrepresented in broader clinical literature. By focusing on Alabama Medicaid beneficiaries, the study provides targeted insights into the lived experiences and support needs of this vulnerable group.

The originality of this line of work lies in its specific focus on the mediating or moderating role of social support in the context of diabetes distress for a publicly insured population. While general studies on diabetes exist, this research appears to offer a nuanced perspective on how structural and social factors interact to affect patient outcomes in a state-specific Medicaid context, highlighting the importance of psychosocial interventions in chronic disease management.

The significance of this contribution is evidenced by its reception in the academic community, with the core paper accumulating 37 citations. Notably, 96.8% of these citations originate from independent researchers, indicating that the work has resonated beyond the author's immediate circle and has been adopted by the broader scientific community to inform subsequent research on diabetes care and psychosocial support systems.

**Citing-text excerpts — how the field used this work**

**RESULT** The mediating role of diabetes stigma and self-efficacy in relieving diabetes distress among patients with type 2 diabetes mellitus: a multicenter cross-sectional study.

"The results of this study also showed that high social support predicted low diabetes stigma and high diabetes self-efficacy, which is similar to the results of other studies (Holmes-Truscott et al., 2020; Al-Dwaikat et al., 2021; Presley et al., 2021; Yang et al., 2021)."

## D. Citing-Institution Prestige & Geography

### Top citing institutions

Institution	Country	World ranking	Citing papers
Wroclaw Medical University	Poland	SCImago #2550 · THE 501–600	2
University of Michigan	United States	SCImago #43 · THE 23 · QS 45	2
University of North Carolina at Chapel Hill	United States	THE 78 · QS =140	2
Cleveland Clinic Foundation	United States	—	1

Institution	Country	World ranking	Citing papers
University of Florence	Italy	SCImago #574 · THE 351–400 · QS =404	1
Patient Forum	Denmark	—	1
East Tennessee State University	United States	SCImago #6182	1
IRCCS San Raffaele Pisana	Italy	SCImago #2804	1
Medical University of Silesia	Poland	SCImago #3647 · THE 1201–1500	1
St George's, University of London	United Kingdom	—	1

### Geographic distribution of citing authors

Country	Citing papers
United States	17
China	4
Italy	3
Poland	2
Spain	2
Greece	1
Iran	1
Jordan	1
Lithuania	1
Mali	1
Afghanistan	1
Pakistan	1

Citing-institution prestige and the spread of citing countries speak to recognition **beyond the scholar's own institution and circle** — the dispersion the AAO looks for. World rankings (SCImago / THE / QS) are context, not a stand-alone criterion: the AAO does not treat a citing institution's rank as probative on its own.

## E. Citation Growth Over Time

Distinct citing papers by publication year. Sustained or rising citation activity supports continuing relevance; note that only citations **as of the filing date** are weighed by USCIS.

2024 ██████████ 7

2025 ██████████ 9

2026 ██████ 2

## F. AAO Precedent Considerations

---

### Pre-filing self-check (AAO denial patterns)

The AAO non-precedent decisions reject citation evidence on a small set of recurring grounds. Confirm the petition addresses each before filing:

- Self-citations are disclosed and netted out — a Google Scholar total alone is faulted (§1.1).
- Evidence is per individual article, not a body-of-work aggregate total (§1.2).
- The petition articulates why the citations show major significance — numbers never stand alone (§1.5).
- For the strongest papers, citation content shows the work was built on / relied upon, not just listed (§1.6, §2.2).
- Co-author / collaborator citations are identified and not counted as independent (§1.7).
- Recognition is shown beyond the scholar's own institution and circle (§1.8).
- Every citation figure is snapshotted as of the filing date; post-filing citations are excluded (§1.9).
- Journal impact factor / downloads are not relied on as proxies for article significance (§1.10, §1.12).
- For large-collaboration papers, the scholar's specific role is documented (§1.13).
- Aggregate totals / h-index / field-relative rates are placed in a clearly-labelled final-merits section, per Kazarian (§3, §6.1.7).

#### Disclaimer

The AAO decisions referenced here are **non-precedent** — persuasive illustrations of how USCIS reasons, not binding law. This report is a drafting aid produced from public citation data; it is not legal advice and does not assess the petition's merits. All analysis must be reviewed by qualified immigration counsel.

## G. Citation Evidence Index

---

Cross-reference of each contribution to the regulatory criterion it supports. Counsel should map these to the petition's exhibit numbers.
